Our vision
The creation of a competitive horticultural sector in the Nacala Corridor and more in general Northern Mozambique, characterized by high productivity and supply all around the year. A competitive horticultural sector substitutes inter-regional and foreign imports and serves as steady income creator for female and male smallholder farmers.

Achievements of the project
- 6700 farmers had access to high-quality seed, resulting in better yields.
- 16% increase of horticultural smallholders' annual net income.

Our interventions
Improvement of the production process
Crop breeding
- Dissemination of new horticultural varieties from Brazil.
- Introduction and promotion of tropical vegetables
- Introduction cross sampling beans and cassava fast multiplication technology
- Promotion domestic seeds and reproduction
- Micro nurseries with grafting

Crop management
- Training in good agricultural practices
- Introducing small animal horticulture integration (duck farming) and fruit orchards
- Hydroponic production (lettuce)

Post harvest
- Introducing new packaging and transportation.

Technical assistance and irrigation solutions
- Use of satellite images to identify appropriate sites for the construction of underground dams
- Introduction of affordable irrigation technologies like hip pumps and microirrigation systems
- Introduction of an irrigation calendar, manuals on small dams construction.

Promoting sector competitiveness
- Promoting local production to replace imports
- Strengthening links between small scale producers and buyers
- Introduction of local basic processing units
